

Hip & Valley Gasket 30m

For a hip or valley it is the same gasket reversed.

The gasket is also ideal for the cresfinex ridge sections enabling them to accommodate angles of 50-90 degrees.

This unique product is ideal for hips and valleys when installed into Capex Glazing Bars replacing its standard glazing gasket.

Produced in tough UV stable polymer with a non-stretch cord. It can be butt jointed using cyanocrylate (Super-Glue) adhesive or Exitex Elast-o-Seal in a matching colour.
