Heco Topix professional wood construction screws have been designed specifically for use in softwood and hardwood without pre-drilling. They are available in both Carbon Steel and Stainless Steel to maximise suitability across a broad range of applications.

There are however some instances in hardwood where it is advisable to either pre-drill or use Stainless Steel instead of carbon steel fixings.

This is because of the natural variations that occur in hardwoods dependent on species, age, and humidity. In addition application loads and uniformity of joint can vary considerably.
