

Japanese Kugihiki Noko Flushcut Saw

The teeth of this Kugihiki flush cutting saw have no set so the blade can cut right at the surface without disfiguring it. This allows the user to cut dowels, through tenons or trim excess material of plugs without marking the surrounding surface.

The saw's great flexibility also permits it access into unusually tight spaces.

The blade is 125mm long with 24tpi.

Fitted with a traditional wooden handle, suitable for use for both left and right handed use.

Blade thickness 0.20mm
