

# Heavy duty cast router table

This solidly constructed router table not only extends the versatility of your machine, it makes repeat and accurate work much easier. Having a table with properly guarded fences for your work can also improve safety.

This popular Record Power table has been upgraded in several key areas to provide even greater value for money.

The RPMS-R Router Table is a heavy and well specified accessory suitable for a wide variety of routers and applications. The heart of this table is its finely ground cast iron table which provides a solid and stable foundation for all functions.

Considering the weight, power and speeds of modern 1/2" routers the importance of a solid table should not be underestimated and weighing in at 54kg the RPMS-R is one of the heaviest on the market, with the wide base and angled legs further improving stability. In addition to the main cast table, there is a sliding aluminium table with cross cut mitre fence and hold down clamp for undertaking end grain work.

The main fences can be set independently and feature micro adjustment. The table has three pairs of tapped holes so the fence can be easily repositioned to accommodate different sizes of workpiece. Also, when profiling, the fence can be reversed so the operator does not need to lean over the sliding table and can work comfortably from the other side of the machine utilising the main cast table itself. A dust extraction hood is fitted to the main fence and guard area and a no-volt release switch is included.

Cast Iron Table Size: 783 x 250 mm

Extraction Port Diameter: 57 mm

Weight: 54 kg

Size: H850 x W784 x D560 mm
