

Hikoki DV18DBFL2

From Hitachi comes their latest products under the new HiKOKI name.

The Hitachi DV18DB Combi Drill has a lightweight, compact design that is ideal for working in confined spaces. It is fitted with a 13mm metal chuck that has a ratcheting lock and a spindle lock. The forward/reverse switch makes it easy to switch between applications. The soft grip handle provides comfort and reduces user fatigue. There is also a handy metal belt clip and an LED spotlight that illuminates the workpiece.

The brushless motor offers a significantly extended product lifecycle by eliminating trouble including armature burnout, layer short or commutator wear even in severe work environments. Besides, no carbon brush replacement is required.
