

501 PVA Bond

Product Description

EVERBUILD PVA BOND is a medium viscosity, polyvinyl alcohol stabilized, externally plasticised, vinyl acetate homopolymer. Contains no harmful phthalates.

It has been designed specifically for use in the building industry as a general purpose bonding agent, and additive for concrete and plasters and as a multi-use adhesive.

PVA BOND meets the bond strength requirements of BS5270, "Polyvinyl acetate (PVAC) emulsion bonding agents for internal use with gypsum building plasters".

Benefits

Greatly improved adhesion to a wide range of substrates including dense concrete, glass, steel, tiles etc.

Mixes may be applied in much thinner sections resistance to salt permeation.

Reduced surface dusting of concrete

Improves flexibility of sand cement products.

Reduced water: cement ratio for equivalent workability

Improved frost resistance

Reduces surface porosity of mortar/plaster

Universal polyvinyl acetate (PVA) adhesives or bonding agents find wide use in the building industry. The areas of use are generally non-specialised, however, there is a requirement to meet BS5270 "Polyvinyl acetate bonding agents for internal use with gypsum modified plasters".

PVA BOND meets the requirements of the Universal PVA market and can be used in a similar fashion to other phthalate plasticised PVA emulsions and visually appears no different.

PVA BOND contains an environmentally acceptable non-phthalate ester plasticiser to enable low temperature film formation and confer film flexibility.

Price

501 P.V.A Bond - 1 Litre (Product reference 4289-9919)	£5.52
