

Alukap-SS Wall & Eaves Beam Endcap =

ALUKAP-SS Wall plate and eaves beam end cap, Right handed in white

The ALUKAP-SS self supporting bar and system has been created to offer an attractive alternative to other self supporting bars and offer fantastic strength and spanning possibilities.

Manufactured from mostly aluminium the bars are a lightweight option and are simple to install. Saving time and money.

The design allows for almost any size of polycarbonate and glass to be used. Including the industry standards 6mm, 10mm, 16mm, 25mm and even 35mm polycarbonate. Additionally, because of its strength it can be used with single and double glazed glass units, of any thickness.

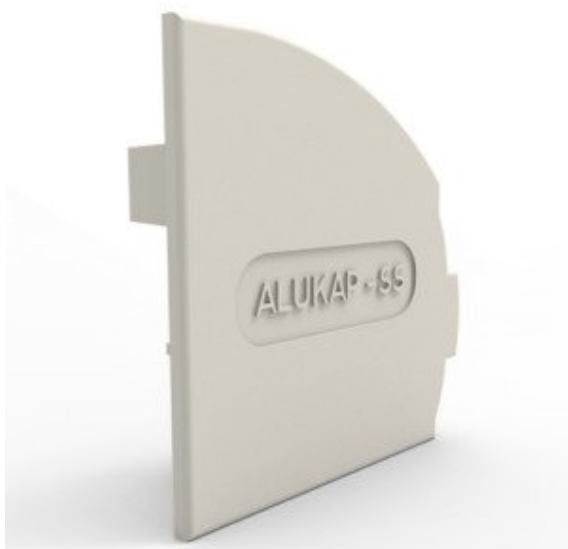

Qualities

- Long Spans
- Self supporting – no need for any timber
- Simple design speeds installation
- All the parts are powder coated – A long lasting finish
- Virtually no upkeep
- Suited to all polycarb and glass units

This system can be used as a lean to type roof where they are attached to a building, or completely free standing with the use of legs and feet. Perfectly suitable for Public, Commercial or Residential installation.

Common Uses

- Decking and Veranda Covers
- Covered Pathways
- Smoking Shelters
- Carports
- Kids Play Areas
- Conservatories
- Lean To's
- Swimming Pools
