

# Titan III chuck with power jaws - Nova Titan 3

The largest chuck in the NOVA chuck range. Ideal for large lathes with 20"/508mm diameter swing and larger. Super Aggressive Holding Power.

The Nova Titan Chuck is a large solid chuck designed for use on large lathes and for larger projects. This solid 5" diameter chuck with it's larger jaw capacity is capable of handling much larger projects than even the SuperNova 2 Chuck.

The Titan can also take all NOVA chuck accessory jaw sets in the current range, however, due to its larger size it is better suited to being used with the larger sizes of accessory jaws.

- Heavy Duty 5" Chuck for larger lathes and turning projects
- Direct thread 1-1/4" x 8TPI- fits most larger lathes (16"-24" lathes)
- Includes 1 set of 5" powergrip jaws (3 screw mount), and Woodworm screw
- Accepts almost all NOVA Jaws (except older Compaq jaws)
