

60 1/2 Low Angle Block Plane

Machined from grey cast iron and precision ground this is an excellent little plane.

The cutter is adjustable for both depth and alignment, and the low 13 1/2 degree seating of the blade makes this particularly suitable for interlocked/wavy grained timbers and even some laminated materials and plastics.

The mouth is adjustable and can be enlarged or reduced to suit the requirements of the work being done.

The 35mm wide blade is hardened and tempered for durability.

Highly recommended.
