

# Oire Nomi Japanese Chisels - Set of 4

Set of 4 CHISELS

Includes sizes:

6mm, 12mm, 18mm, 24mm

These chisels measure approximately 230mm(9") overall and have a blade length of approximately 62mm(2.1/2") with longer shoulders and tangs.

They are well balanced and will take a blow from a hammer for heavier work as well as being capable of taking the thinnest of paring cuts for fine work.

These professional grade chisels are made using high carbon steel (White Paper #2 steel) laminated to a softer low carbon backing steel. They are hardened to over HRC 65 and will hold a razor edge for far longer than an equivalent western chisel. They feature red oak handles, fitted with steel hoops finished with a mushroomed top ready to go.
