

# 201 Mortar Admix

## Product Description

EVERBUILD MORTAR ADMIX is an air entraining liquid plasticising admixture which forms extremely stable air bubbles in mortar mixes. The admix improves workability and freeze/thaw resistance in brick laying mortars, reduces the need for lime and smoothes out variations between separate batches of sand and cement. Conforms to BSEN934- Part 3 (2009)

## Benefits

Outperforms traditional Vinsol Resin Based plasticisers (See specific data)  
Contains a special additive which keeps air in the mix longer than most other competitive admixtures.  
Improves trowelability.  
Easier tamping down and alignment.  
Improves workability.  
Provides resistance to freeze/thaw cycling down to -20C in both wet and dry mortar.  
Chloride free (chloride ion content <0.1%).  
Reduces bleeding.  
Replaces lime in mix, hence reduces possibility of lime bloom and efflorescence.

## Areas For Use

Load bearing brickwork  
Block laying  
External/Internal rendering  
Pointing/repointing brickwork.

## Limitations

Do not use in structural concrete.  
Do not overdose.  
Do not mix with other additives in same gauging water.  
Do not use in lime based mixes

## Application

In all cases, add to mix at an addition rate of 150ml to 250ml per 50kg cement , depending on the degree of plasticising/entrainment required. Note: remember to reduce required quantity of water accordingly. One litre of MORTAR ADMIX added to a 200ltr drum of gauging water will be sufficient for gauging approx. 4 x 50kg cement for mortar or render mixes. Whilst overdosing should be avoided, this formulation does safeguard against moderate overdosing. (up to double the maximum rate).
