

Low angle block plane with adjustable mouth

For years we waited patiently for Clifton to expand their range to include a block plane. The wait has been worth it. Manufactured from bronze, this block plane offers the ultimate in comfort and style. With a high quality bubinga handle, this beauty fits comfortably in the hand, allowing you to shave the surface of your project with ease. Made from a high quality bronze casting, which is cast here in Sheffield UK, the plane is then finished with the new signature graphite colour on the body to offer one of the most stylish block planes on the market.

Blade width 1 5/8. Blade angle is 25 degrees, angle on the bed is 12 degrees making the total angle 37 degrees.

This plane has an adjustable mouth which is a great added feature for flexibility for your projects.
