

Alukap-XR Ridge Bar White=

Aluminium Ridge System for Timber Structures

Alukap®-XR Ridge is designed to work in conjunction with the standard Alukap®-XR 45mm and 60mm, and Hip glazing bars. The Alukap®-XR Ridge bar is designed with a full aluminium snap on cover profile which offers superior cover, providing perfect leak-proof connections from standard or hip rafter abutments. The face of the upright of the Alukap®-XR Ridge Bar is designed at a special angle to make abutments for most common pitches naturally suited.

The Alukap®-XR Ridge System has options of Radius and Gable end caps, ball and spire finials and crests, or can be glazed with a plain top for a more contemporary style.

The Alukap®-XR system is manufactured in White RAL 9010 and Brown RAL 8040 ready for immediate despatch. Any other RAL or BS colour can also be manufactured to order, to suit any specific chosen colour scheme.

There is no Rag gasket supplied with this item
