

# Replacement blade for Stanley (and other) surforms 30004

Microplane blades feature teeth that are incredibly sharp. They create tiny shavings that fall to the floor rather than dust that hangs in the air. Manufactured from stainless steel they require far less effort to use than a more conventional surform blade and remove material much more quickly.

This blade fits all 10" surform frames.

Will work timber and plasterboard, some plastics, foam etc.
